

Antoine Jacquemin Ramírez

Product Data & Marketing Analyst

I turn product and marketing data into clean, structured, decision-ready information. Experienced in product data quality, catalog and master-data management, dashboards, and eCommerce optimization across fintech, retail, and consulting.

Data Science Specialist — Independent Consultant

Self-employed | February 2025 – Present

Deliver data science and analytics projects under contract for multiple clients — building **ETL pipelines** (Python, Pandas, MySQL) that consolidate data from multiple sources, and cleaning, structuring, and standardizing it into reliable, decision-ready datasets.

Develop interactive **Power BI and Tableau dashboards** with automated reporting for sales KPIs, customer metrics, and financial analysis — including multi-branch operations consolidation and portfolio intelligence dashboards.

Data Analyst — Expansion & Marketing

Sede Café | August 2024 – February 2025

Led financial and commercial analysis for the expansion of a Mexican coffee chain in its growth phase. Evaluated new commercial locations through data analysis, profitability projections, and predictive models built in Python, analyzing investment budgets of \$2–3M per location to support viability decisions.

Designed Power BI dashboards for operational KPIs and marketing metrics, controlled a ~\$50K monthly digital marketing budget, and implemented Google Analytics to improve conversion measurement. Identified three profitable locations and reduced cost per acquisition significantly.

Data & Marketing Analyst (Project)

Dynasoft | February 2024 – June 2024

Consulting project on digital transformation for B2B clients. Analyzed a database of 2,500+ clients, **cleaning, standardizing, and normalizing product and customer data** into consistent formats to support the digital migration strategy.

Built Power BI dashboards and automated reporting with Python and SQL, connecting **product data to eCommerce and digital performance** so leadership and product teams could act on reliable numbers. Delivered under a \$2M budget.

Product Data & Growth Analyst

Grupo Salinas – Tiendas Neto | August 2022 – January 2024

Part of the growth and expansion team of a national retail chain, working daily with **large product catalogs and SKU-level data**. Managed and improved **product data quality** — running validation and consistency checks, deduplication, and standardization to keep **product master data** accurate and reliable across systems.

Maintained structured product information following **PIM logic** and worked with **ACES & PIES** product data — mapping attributes, categories, and identifiers into strict schemas so the catalog stayed machine-readable and consistent across every platform that consumed it.

Built Tableau dashboards for sales, performance, and profitability, and handled client segmentation over 30,000+ records to support local marketing decisions and expansion ROI analysis.

Marketing Analyst & Growth Specialist

Donadora (Fintech) | January 2020 – January 2022

Started my career in fintech, managing a ~\$500K annual marketing budget with daily control on Facebook Ads and Google Ads. Analyzed CAC, ROAS, and conversion, running A/B tests and funnel optimization.

Built client segmentation through RFM analysis over ~30,000 users and automated reporting with Python, SQL, and Google Data Studio for full performance visibility.

Professional Profile

Product Data & Marketing Analyst with ~5 years turning raw data into clean, structured systems. Focused on product data quality, catalog management, and eCommerce, across fintech, retail, and consulting.

Core Skills

- Product data quality & standardization
- PIM logic & catalog / master data
- ACES & PIES data management
- eCommerce data optimization
- SQL & advanced Excel
- Power BI & Tableau dashboards
- Python for data analysis
- Data cleaning, deduplication, validation

Education & Certifications

Bachelor's in International Marketing

Universidad del Pedregal (2014–2018)

Data Science — Universidad Anáhuac (2023–2024)

Artificial Intelligence — Universidad Anáhuac (2023–2024)

Big Data & Data Science — Universidad Anáhuac (2025)

Google Analytics IQ (2024)

Python for Data Science — Coursera (2023)

Languages

Spanish (Native)

English (C1)

French (B1)

Interests

Product data environments, eCommerce, dashboards, funnel optimization, 3D printing, and data-driven design.
